Fax for Asterisk Policy

License keys for Fax For Asterisk channels are intended for use only on a single server and must be activated (registered) on the server on which they will be used.

It is extremely important that you carefully follow the instructions provided in the README file for installing a new Fax For Asterisk key to your Asterisk server and for backing up your Fax For Asterisk key(s).

The Fax For Asterisk key must be re-registered if certain hardware changes are made to your Asterisk server.

A Fax For Asterisk key can only be re-registered once without authorization from Digium, so we strongly recommend that you make a backup copy of the license file created during the key activation (registration).

After these two initial registrations a new key will need to be purchased.

Multiple Fax For Asterisk keys may be registered to the same Asterisk server. This allows the user to increase the total number of available Fax For Asterisk channels authorized for use on that server. New Fax For Asterisk keys may be registered to your Asterisk server using the same instructions provided in the Installation Procedure section of the README file. Note that a single license key file for a given number of channels may not be later split among different servers.

All purchases of Fax For Asterisk keys are final. Refunds are not available for Fax For Asterisk related purchases under any circumstances.

Fax For Asterisk and Free Fax For Asterisk are provided for 32-bit and 64 bit x86 Linux systems.
